Graduate Student Travel Grant Application Form ____________________________________ 39
Pharmaceutical Sciences Graduate Student Final Check List _________________________ 40

Note: The forms on pages 27-40 are available online at https://pharmacy.oregonstate.edu/phd-and-ms-student-resources

Templates for student-advisor agreements are also available at the above URL.

The annual review of progress will be provided annually in Spring term as an online survey.
Getting Started

Welcome to the Oregon State College of Pharmacy! Oregon State is a leading public research university that is the state’s Land Grant university and is one of only two universities in the U.S. to have Sea Grant, Space Grant and Sun Grant designations. The College of Pharmacy at Oregon State places high priority on graduate education and the improvement of human health by advancing the discovery and understanding of medicines. We strive to prepare our graduate students of today to be the pharmaceutical sciences researchers of tomorrow. We are pleased that you have chosen to join our graduate programs. Upon graduation we expect that pharmaceutical sciences graduate students will be competent to:

- Expand the knowledge of their discipline(s), having developed:
  - Research and scholarship skills.
  - An extensive understanding of the knowledge base of the discipline.
  - A broad, general understanding of pharmaceutical and health biosciences.
- Communicate research findings to improve the knowledge base in pharmaceutical sciences,
  - Give oral presentations in scientific and public forums.
  - Produce scientific writing for manuscripts for peer-reviewed journals.
- Enter the profession of pharmaceutical science, having developed:
  - A network of professional peers and role models.
  - An understanding of the requirements of academic, industrial, or other workplaces.
  - A sense of the culture of pharmaceutical science.
  - A deep appreciation for the ethical conduct of research.
- Teach and mentor future pharmaceutical scientists, having experienced:
  - A compelling learning environment.
  - Opportunities to serve as a teacher and mentor.

Week 1

1. If you have not already done so, email professors whose labs you are interested to work in for your research rotations (normally three) and arrange meetings with them to determine which term (Fall, Winter or Spring) they are able to host you in their lab. If you have already committed to a specific professor’s research group for your PhD, contact the professor – this professor will be your “major advisor” for your PhD.

2. Obtain a university ID card from the ID Center in the Memorial Union (room 103. If you have not yet activated your Oregon State University email account (ONID), please do so at the website https://onid.oregonstate.edu/ and choose “Sign Up For ONID.”

3. Register for the gspharm listserv (mandatory) at the website https://lists.oregonstate.edu

4. Outline a program of study (POS) for your first term with your research advisor or the Director of Graduate Programs and register for classes. Also try to plan out all of your courses for the first year – different courses are offered with different frequencies and this may impact your ability to meet program requirements. See GradProgram_POSBuilder_template for a template spreadsheet for this.

5. Discuss expectations for research work with your research advisor.
6. Obtain keys – ask your research advisor to make the appropriate request to the Pharmacy main office.

7. Take advantage of university orientation programs to get familiar with the Valley Library, electronic resources, and university programs for graduate students:
   https://gradschool.oregonstate.edu/current-students/new-graduate-students/grad-welcome-week-2022

8. Discuss with your research advisor (professor whose lab you will work in) the potential need for laboratory safety training, radiation safety training, animal care and use training, dive certification, NMR check-out, English language training, or other specific concerns.

9. Familiarize yourself with safety equipment and procedures specific to your chosen lab, (e.g. eyewash/shower, fire extinguisher, first aid kit, fire blanket, fire escape routes, radiation areas).

10. Browse the Graduate School Catalog for information on policies, organization, fees and funding, degree types and courses:
    https://catalog.oregonstate.edu/college-departments/graduate-school/

Note that the OSU Graduate School (https://gradschool.oregonstate.edu/) is currently located in Heckart Lodge, 2900 SW Jefferson Way, phone 541-737-4881.
Resources for students at Oregon State University, compiled by the Office of Student Life: https://experience.oregonstate.edu/resources

Note for Accidents and Grievances:
For any injury more than a simple scratch, an accident report should be filled out in consultation with your major advisor.

Students are strongly urged to bring issues of grievance to their major advisor, the Graduate Studies Committee (Conroy Sun, Graduate Program Director), the Department Chair (Chrissa Kioussi), the Associate Dean for Academic Programs (Theresa Filtz), or the Interim Dean (Dave Bearden), preferably in that order, for resolution prior to utilizing university channels. University-level grievance procedures are detailed on the graduate school website (https://gradschool.oregonstate.edu/progress/grievance-procedures) and included in the subset of resources below:

Student Advocacy
- **Ombuds Office**: The Ombuds Office provides informal and impartial conflict resolution services for all members of the University community.
- **ASOSU Office of Advocacy**: The ASOSU Office of Advocacy provides assistance for students who have a dispute with a member of the University; free and confidential.

Campus Support Services
- **Equal Opportunity and Access (EOA)**: The Office of Equal Opportunity and Access insures equal opportunity by responding to discrimination or harassment concerns or complaints, implementing policies and practices, giving advice and guidance, and providing training and education related to affirmative action and equal opportunity.
- **Bias Incident Response/Report**: The Office of Institutional Diversity provides a page describing the bias incident response process and a link to a report form.
- **Basic Needs Center**: BNC works to alleviate the effects of hunger, poverty, and other human needs so that students can pursue a quality education. Services provided include a textbook lending program, an emergency food pantry, meal subsidies, emergency housing assistance, and self-service laundry appointments.
- **Diversity and Cultural Engagement (DCE)**: Diversity and Cultural Engagement provides support for campus diversity and cultural centers.
- **Survivor Advocacy and Resource Center**

Health and Wellness
- **Center Against Rape and Domestic Violence (CARDV)**: CARDV is a private, non-profit community service organization dedicated to helping survivors of sexual and domestic violence and their children stay safe, and is free and confidential.
- **Counseling and Psychological Services (CAPS)**: CAPS is intended to assist students in addressing the challenges and difficulties they are facing. CAPS provides confidential sexual assault support services. Their services are free or of minimal charge.
- **Student Health Services (SHS)**: SHS provides health care (medical and psychiatric), self-care guides, and a Sexual Assault Nurse Examiner.

Safety
- **Department of Public Safety (DPS)**: DPS provides crime prevention and safety tips, campus crime reports, and the OSU Emergency Alert System.
- **ASOSU SafeRide**: SafeRide is a service dedicated to assault prevention, to OSU students, Faculty and Staff. One of the most important services they offer is free transportation to and from campus for all OSU students. To order a ride, download the TapRide app or call 541-737-5000 (from off campus) or 7-5000 (from campus phone). Before calling, please review their...
policies, boundaries and hours of operation.
Guidelines for the Concurrent Degrees of M.S. and Ph.D. in Pharmaceutical Sciences
See also: Committee Meetings, Exams and Thesis

OVERVIEW

All matriculating Ph.D. students are offered the opportunity to enroll concurrently in the degree of Master of Science (M.S.) in Pharmaceutical Sciences. Graduate students will thus have the opportunity to gain an M.S. degree en route to a Ph.D. degree, with the required M.S. final oral exam being held immediately before the Ph.D. preliminary oral (candidacy) exam.

In consultation with their major advisor and graduate program committee, students will select either a non-thesis or thesis MS degree, for which the Graduate School requirements are stated below. In either case, M.S. degrees require a total of 45 credit hours, and up to 9 credit hours of blanket courses that are not part of the ‘capstone’ research project credits can be counted towards this target. No more than 50% of the TOTAL credits can be slash courses (the 5XX component of a 4XX/5XX course). Training in the conduct of scholarly or professional activities in an ethical manner (e.g. GRAD520) is required.

Thus, an acceptable non-thesis MS program of study (POS) could be 30-33 credit hours of non-blanket graduate level classes (4XX/5XX, stand-alone 5XX, 6XX or approved 7XX), 3-6 credit hours of PHAR 501 (research rotation) as capstone, 1-3 credit hours of PHAR 507 (seminar) and 8-6 credit hours of other blanket courses (more PHAR 501, 507 or 505).

NON-THESIS MS (at least 45 credits) – most common
Didactic (lecture/theory) course credits: 30 (at least, can be more)
‘Capstone’ Project: 3-6 credits of PHAR 501

NOTE: additional PHAR 501 credits (but not 503 credits) can be added to the ‘major courses’ list to make up 45 credits in total. The maximum number of blanket numbered credits is 9.

Committee: three members of the graduate faculty – two in the major field and one in the minor field if a minor is included. When a minor is not included, the third member may be from the graduate faculty at large.

THESIS MS (at least 45 credits)
Didactic (lecture/theory) course credits: 24 (at least, can be more)
‘Capstone’ research: 6-12 credit hours of PHAR 503

Committee: at least four members of the graduate faculty – two in the major field, one in the minor field if a minor is included, and a Graduate Council Representative. When a minor is not included, the fourth member may be from the graduate faculty at large.

Important information for planning an M.S./Ph.D. graduate program of study
- The didactic course work from the M.S. program can be used for the Ph.D. program, with the exception of 501 and 503 or other non-graded credits.
- M.S. (thesis) and Ph.D. thesis topics may overlap
- The same thesis credits cannot be used for M.S. (thesis, PHAR 503, 6-12 credits) and Ph.D. (PHAR 603, ≥36 credits) degrees.
- First year graduate students should register for lab research under PHAR 501 (non-thesis project) or 503 (thesis), NOT PHAR 601 or 603.

**STEPS TO ENROLL IN AND COMPLETE A CONCURRENT M.S. DEGREE**

- Discuss with a graduate faculty member or the director of graduate programs (Conroy Sun) and decide whether to do a non-thesis or thesis M.S.
- Submit a **concurrent degree (change of degree) form** to add the chosen M.S. degree BEFORE scheduling a first program meeting and submitting a Ph.D. program of study or scheduling your Ph.D. preliminary oral exam.
- Decide on three committee members for your M.S. program – one will be your major advisor for your Ph.D. It is recommended that the other two are members of your Ph.D. program committee. You do not need a GCR.
- Prepare both M.S. and Ph.D. program of study documents for your first program meetings so that both will be circulated for signatures.
- Finish your classes and research project requirements and prepare for your Ph.D. preliminary oral exam.
- **Schedule your final oral exam for your M.S. (one hour) to start immediately BEFORE your Ph.D preliminary oral exam (two hours). These exams (3 hours in total) both need to be scheduled with the Graduate School.**
- Ask your M.S. committee members to stay behind when your preliminary oral exam discussion and closed evaluation have been completed, so that they can discuss (and sign forms for) your M.S. degree requirements and completion.
- **Celebrate your M.S. in Pharmaceutical Sciences, and Ph.D. candidacy!**

See an [example non-thesis M.S. program of study](#) here.
See an [example thesis M.S. program of study](#) here.
Academic requirements overview
The Graduate School at Oregon State University sets minimum requirements for graduate degrees. In certain instances, the College of Pharmacy stipulates more stringent requirements for its students than the minimums established by the Graduate School. Students should pay particular attention that the College of Pharmacy differs from the Graduate School in requiring that the oral prelim exam be completed within 9 academic terms of commencing a PhD degree program, that the remote participation policy is more stringent in regard to student participation, and that a 3.0 GPA must be maintained in all didactic coursework to remain in good standing.

Curriculum
See Coursework and course curricula below. All pharmaceutical sciences graduate students are required to take PHAR 525 (735), Foundations of Drug Action I (3 credits, fall term). Training in responsible conduct of research is also required and may be satisfied by enrollment in GRAD 520. Otherwise, the coursework to be completed in the first two to two-and-a-half years of the program varies based on disciplinary tracks. Guidelines for programs of study in drug discovery, gene regulation and disease, and targeted drug delivery, but students should consult their major advisor for specifics.

Credit Requirements
OSU requires a total of 108 credits for a Ph.D. degree, and 45 credits for an M.S. degree. Graduate students must complete 27 credit hours of didactic course work for a Ph.D. degree and 24 credit hours for an M.S. degree (thesis or non-thesis). “Didactic courses” exclude thesis, seminar, and reading and conference classes (“blanket credits”, meaning courses with a “0” in the middle number, e.g., PHAR 507). With the exception of PHAR 503 and PHAR 603 (thesis research), students may only include a maximum of 15 blanket credits on their program of study. Despite this OSU rule, pharmaceutical sciences graduate students should register for 1 credit of PHAR 507 (Seminar) each term.

Students paid as a GRA or a GTA with a tuition waiver must sign up for the maximum number of credits each academic term (16) and 5 credits in summer term using a variable number of units of PHAR 603 (PhD or MS Thesis Research) to fill out their schedule as needed.

Rotation Requirements
New students who have GTA funding are required to complete three research rotations in their first year. Rotations are generally completed within the student’s discipline, but a student is allowed to choose a lab outside their own discipline to gain a breadth of experience if desired. Rotating students must register for a minimum of 3 credits of PHAR 501 (for MS degree) or PHAR 601 (for PhD degree) each term for their rotations.

GPA requirement
Pharmaceutical sciences graduate students are required to maintain a 3.0 GPA in all didactic coursework to remain in good academic standing. This requirement is more rigorous than the university’s requirement of a 3.0 GPA overall. The College of Pharmacy graduate studies committee is responsible for decisions regarding the progress of students not meeting the pharmaceutical sciences program GPA requirement, which may include loss of funding. The OSU Graduate School automatically handles students not meeting the university GPA requirement. “C” grades are acceptable as long as the student average does not fall below 3.0.

Preliminary exam for PhD students
All pharmaceutical sciences PhD students are required to complete their preliminary exams within nine terms of enrollment (excluding summer). Students who do not complete their preliminary exams in a
timely manner may be subject to academic probation and/or a loss of GRA or GTA funding. Students who are in danger of not completing their preliminary exam by the end of the ninth term MUST submit a letter explaining the circumstances to the graduate studies committee at least 6 weeks before the end of the ninth term. Thus, students should begin to plan their preliminary exam dates at the beginning of their third year, and not wait until close to the deadline.

Policy on distance participation in exams and committee meetings
OSU will allow any member of a thesis committee, including the student, to participate remotely via videoconference in committee meetings. However, the College of Pharmacy requires that the student MUST be on an OSU campus for their preliminary oral and thesis defense exams. For a program meeting or a preliminary exam, the College of Pharmacy also requires that a faculty member is physically present at the same remote site as the student participating remotely. The remote participation form must be completed and submitted to the Graduate School prior to any meeting in which a member will be at a remote location (forms can be found at https://gradschool.oregonstate.edu/forms).

Waiver of course requirements
Students who, in consultation with their major advisor, desire to waive any of the above pharmacy program requirements need to submit a letter to the graduate studies committee (email Noelle Cummings). The letter should explain the reason for the waiver request and be co-signed by the major advisor. If approved, the committee will issue a letter to be included with the student’s Program of Study and kept on file.

Continuous enrollment policy
OSU has a continuous enrollment policy for graduate students. Students must be enrolled for a minimum of 3 credits each academic term every year, or request a leave of absence, to remain in good standing. Please discuss the continuous enrollment policy with your thesis advisor or the Director of Graduate Studies if you will be taking any time off from your studies for any reason, including leaving for an internship during the academic year. Please see the graduate school catalog for more detail if needed. Requests for leave of absence must be filed AT LEAST two weeks before the beginning of the term.

Program committee meetings
The first committee meeting must be held within four terms of matriculation by OSU policy and within two terms for MS students and PhD students going directly into a chosen research lab (on GRA). The next committee meeting is generally the preliminary exam meeting held within nine terms of matriculation by College of Pharmacy policy (excepting dual degree students). After successful completion of the preliminary exam, a student is required to have annual thesis committee meetings until graduation. More detailed information about committees and meetings is provided in the section below on Committee Meetings, Exams and Thesis.

Annual assessment of progress
Starting in their second year, students and advisors are required to complete an annual assessment of progress and hold an annual committee meeting. The form and instructions are provided as an online survey in March. The annual assessment may be discussed with the thesis committee if needed.
Life as a pharmaceutical sciences graduate student

Funding
Graduate assistantships are normally granted only to PhD-seeking students in pharmaceutical sciences. Graduate students admitted without funding should not expect that funding will become available at some point in their graduate program.
A limited number of teaching assistantships (GTAs) to assist with undergraduate or professional courses) and also NIH T32 fellowships (in natural products research) are available each year to outstanding students. Along with a stipend, these assistantships and fellowships provide a complete tuition remission or waiver for the academic year. **Note that no more than five years of GTA or T32 fellowship support will be provided to any one student.** Funding for graduate research assistants (GRAs) is generally available to graduate students in or beyond their second year who are devoting the majority of their time to research. The research performed by these assistants is usually applicable to the doctoral dissertation. These research assistantships are funded by grants to individual faculty members from outside agencies, so availability is variable. Students are encouraged to work with their major advisors to apply for the limited number of highly competitive Graduate School fellowships and awards available each year: [https://gradschool.oregonstate.edu/finance/graduate-fellowships-and-scholarships](https://gradschool.oregonstate.edu/finance/graduate-fellowships-and-scholarships)

Look out for other internal and external award/fellowship opportunities circulated by email throughout the year.

Teaching
Pharmaceutical sciences graduate programs do not have a formal teaching requirement. However, opportunities for gaining experience in the classroom are available for those wishing to teach PHAR 210, Terminology of the Health Sciences. See the Graduate School website for information on courses related to teaching and the Graduate Certificate in College and University Teaching: [https://gradschool.oregonstate.edu/graduate-student-success/teaching-and-facilitation](https://gradschool.oregonstate.edu/graduate-student-success/teaching-and-facilitation)

Annual Spring retreat of the College of Pharmacy
Students (except first years) are expected to present an oral or poster presentation at each year's graduate student/faculty research retreat which is expected to be held in March at the beginning of Spring break pending resolution of the covid-19 pandemic.

Sometime before the retreat, first year students should visit Student Multimedia Services ([https://is.oregonstate.edu/sms/multimedia-resources/poster-tips](https://is.oregonstate.edu/sms/multimedia-resources/poster-tips)) and to review resources for creating posters. Also see: [https://sites.google.com/ncsu.edu/effective-posters/](https://sites.google.com/ncsu.edu/effective-posters/) for some very nice hints on effective poster presentations.

Literature reading good practices
Every week spend one to two hours reading broadly in science, looking at Science, Nature and specialty journals.
Every week perform a directed PubMed or SciFinder search, or join an automated literature retrieval service.
Develop an electronic database of references (e.g. Zotero®, Mendeley®, Endnote®, Papers®, or other reference software), keep it updated, and keep a file drawer of manuscripts of greatest
interest and importance. The OSU library has regular tutorials on the use of reference manager software to help keep all of these papers organized. Always carry photocopies of papers of interest for reading later while waiting in line, eating lunch, in the doctor's waiting room, trying to go to sleep, etc.

**Seminars**
Pharmaceutical sciences seminars are announced through the gspharm listserv and are mandatory (PHAR 507) for graduate students. Seminar topics outside of the student's discipline provide breadth to a program of graduate study that complements the depth necessary for successful thesis work. Attend three to four seminars around campus per month (Chemistry, Toxicology, Biochemistry, Botany, Zoology, CGRB, Microbiology, Vet Med, etc.). Take notes and keep a seminar book of ideas.

**Conferences**
Every PhD student is required to attend at least one regional or national meeting and give a presentation (poster or oral) prior to graduation. Therefore, discuss conference attendance with your advisor. Local, regional and/or national meetings provide opportunities for students in all pharmacy disciplines to practice public speaking and engage in scientific discourse with fellow researchers in a variety of settings. The College of Pharmacy has some funds to allow senior graduate students to attend a national meeting. Students in their 3rd – 5th year are encouraged to apply for the travel funds. The Graduate School provides graduate student travel awards to cover up to half of the full cost of attending a conference (see http://gradschool.oregonstate.edu/awards/travel-award). Therefore, work with your advisor and the college to secure funds for you to travel to a meeting.

Attending a conference is work! Prepare before the conference by becoming rigorously up-to-date with the literature. Meet as many people in your field as possible by talking with them at poster sessions, asking insightful questions at scientific sessions, and by joining in the social activities. Keep a conference notebook with ideas, contacts, potential postdoctoral opportunities, and follow-up tasks.

**Publications**
All graduating Ph.D. students are required to have either published or submitted a first-author manuscript containing primary research (not simply a literature review) for publication in the peer-reviewed literature prior to graduation. Work with your advisor to prepare and submit your scholarly work to peer-reviewed journals in your field.

**Intellectual Property**
OSU has an Office of Commercialization and Corporate Development (OCCD, https://advantage.oregonstate.edu/). A licensing officer from OCCD will present a seminar (normally in January) to provide further information and answer questions. To learn more about intellectual property and inventorship see below and/or ask faculty: https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4526723/
https://innovate.uncg.edu/title-to-ip-and-inventorship/
Professionalism
Join a scientific society as a student member. The College of Pharmacy has a chapter of the American Association of Pharmaceutical Sciences (AAPS) that all students, MS, PhD and PharmD, are encouraged to join. AAPS provides funds for a seminar speaker every year chosen by the student members.

Most regional and national societies (e.g., American Society for Pharmacognosy (ASP – natural products), Society of Toxicology (SoT), Society for Neuroscience, American Society for Pharmacology and Experimental Therapeutics (ASPET) etc), have reduced rates for students, allow members to apply for travel awards to conferences, provide job search opportunities, and other benefits. Societies are one means to be involved in the future of your profession.

Find a journal club on campus whose research interests are closely aligned with yours. Within the Department of Pharmaceutical Sciences, targeted drug delivery has a required journal club, and drug discovery and gene regulation and disease also run journal clubs (you can sign up for PHAR 505, Reading and Conference). Discuss other options (e.g. in other departments) with your major advisor.

Ethics
The ethics involved in scientific research are too numerous to delineate here but include a responsibility to be a wise steward of the public’s money by avoiding unnecessary spending, working diligently, and reporting all work honestly.

All graduate students are required to complete a course in scientific research ethics (GRAD 520) and also a graduate-level DPD (difference, power, and discrimination) course, such as GRAD 542 or equivalent.

Graduate students have a responsibility to keep accurate and detailed lab notebooks for future reference and to acknowledge everyone who provides intellectual, physical, and monetary support. Plagiarism, fabrication or falsification of research data are serious ethical breaches which will result in dismissal from the university. Students should never perform a procedure or use equipment for which they have not received training or have uncertainties about their skills. Everyone should be responsible for cleaning up their own messes. University laboratories are often excitingly diverse environments with scientists of many nationalities working together; mutual respect is absolutely expected.

Safety
Laboratory safety should be discussed with your rotation advisors and your major advisor before you start work in any laboratory and before you start any new protocol. At a minimum, students in all of our research labs in pharmacy should be wearing a lab coat, closed-toe shoes, leg coverings, gloves and safety glasses when working at the bench. More detailed requirements and information for specific kinds of lab tasks (e.g. chemical safety, biosafety) are available on the OSU environmental health and safety website at http://oregonstate.edu/ehs. Always ask if you are not sure about a procedure, operating equipment or entering a new area.

Dr. Phil Proteau is our chemical hygiene and safety officer for the College of Pharmacy.
If working late or odd hours, remember that you need an After Hours Pass from the Department of Public Safety (arranged through College of Pharmacy main office). Also, check to see who is in the building and let them know that you are present. Many labs have a neighbor with a common door. Get to know your neighbors and check in on them. Never let anyone you do not know well into the locked building after hours or on weekends and make sure that the external doors are closed behind you when you leave. In the past, equipment has been stolen from unlocked labs and unauthorized individuals have occupied the building. Laboratory doors should be locked during the day if no one is working in them.

**Time sheets, sick leave and vacation – graduate assistants**

If you are a graduate student employee (GRA or GTA), you need to fill out a timesheet online every month. Please contact Noelle Cummings, Graduate Program Coordinator, for more information. It is important to communicate with your research advisor well ahead of time if you want to take vacation time, and also to let them know when you are ill, as soon as possible. Many students are far from home and if faculty do not hear from a student, they will be concerned for the student’s wellbeing.

More information about the graduate assistant position can be found here [https://hr.oregonstate.edu/employees/employee-and-labor-relations/graduate-assistants](https://hr.oregonstate.edu/employees/employee-and-labor-relations/graduate-assistants), and the Collective Bargaining Agreement for 2020-2024 can be found here: [https://hr.oregonstate.edu/sites/hr.oregonstate.edu/files/cge_cba_2020-2024.pdf](https://hr.oregonstate.edu/sites/hr.oregonstate.edu/files/cge_cba_2020-2024.pdf)

Article 30 of the Collective Bargaining Agreement addresses sick leave accrual. Student employee benefits for each academic term include: tuition and fee remission, health insurance, and sick leave accrual. Sick Leave accruals will be available at the beginning of each academic term. Accrual balances may be viewed by the Graduate Employee in the on-line time and attendance system, EmpCenter, at [https://mytime.oregonstate.edu/](https://mytime.oregonstate.edu/). For pharmaceutical sciences student employees (0.43 FTE), leave accrual is 11 hours per term.
Committee Meetings, Exams and Thesis

MS Degree Committee Meetings, Exams and Thesis or Project Report

Program Committee Meeting:
A committee meeting and program of study form MUST be submitted before completing 18 graduate credits by university rules. The College of Pharmacy expects the MS thesis committee meeting to be held by the 4th academic quarter of study or before 18 graduate credits recorded on the program of study are accrued, whichever comes first.

Thesis MS Committee Structure (four members total): The thesis committee is chaired by the student’s primary advisor. Additional committee members need to include at least one other in the major field, and one in the minor field if a minor is included, or from the graduate faculty at large. The fourth member is a graduate council representative (GCR); students should obtain a list of potential representatives from the Graduate School.

Non-Thesis MS Committee Structure (three members total): The thesis committee is chaired by the student’s primary advisor. Additional committee members need to include at least one other in the major field, and one in the minor field if a minor is included, or from the graduate faculty at large. No graduate council representative (GCR) is required.

To prepare for a first committee meeting:
1) If the MS is going to be concurrent with a PhD degree, submit a change of degree form.
2) Establish that all potential committee members are willing to serve and schedule a mutually acceptable meeting time.
3) Receive approval from the graduate school for selection of the graduate council representative if relevant (only for a thesis MS).
4) Inform the OSU graduate school of meeting time and location.

To the first committee meeting (concurrent with the first PhD committee meeting if applicable) bring:
1) A completed program of graduate study on the official form with grades entered. (one copy for each committee member)
2) Any waivers of programmatic requirements
3) Current C.V. (one copy for each committee member)
4) One to two page summary of research to date (emphasize graphic information) and a short description of future work planned. (one copy for each committee member)
5) A fifteen minute presentation on your research to date and plans for the future using Power Point slides.

Note that your major professor may assist you with this material for your first program meeting (this is not an exam)
Final M.S. Oral Exam (non-thesis) / Defense (thesis)

a) For a thesis M.S., students **MUST** obtain instructions for procedure, format and details for finishing the thesis from the university graduate school ([https://gradschool.oregonstate.edu/progress/thesis-guide](https://gradschool.oregonstate.edu/progress/thesis-guide)). OSU allows two different formats for a graduate thesis: standard or manuscript. The student and major advisor should determine which format is appropriate.

b) Before scheduling your final exam or thesis defense, as applicable, you should prepare a list of:
   - Papers published (full citation) and submitted to a journal
   - Manuscripts in preparation
   - Regional and national meetings attended and source of funding
   - Honors/fellowships/awards received
   - Post graduation employment plans

Submit it to your major advisor and the Graduate Studies Committee (Kerry McPhail, Director of Graduate Programs). Your major advisor will hold off on signing your dissertation until this requirement is met.

c) Plan a date for the final exam / thesis defense about two months in advance with your committee; reserve a room for a two hours if you are doing a stand-alone M.S. (thesis or non-thesis), or one hour if you are doing a concurrent M.S (ideally immediately BEFORE your Ph.D. preliminary oral exam).

d) **File all paperwork required by the Graduate School well in advance of the defense date.**

At least **15 weeks** before your Final Oral Defense of Dissertation submit a diploma application.

At least **2 weeks** before your Final Oral Defense of Dissertation:
   - Schedule your Exam by submitting the online Exam Scheduling Form to the Graduate School. **Schedule ONE HOUR FOR A CONCURRENT M.S. (directly before your PhD preliminary oral exam) or two hours for a stand-alone M.S.**
   - Submit pre-text pages to the Graduate School if you are doing a thesis M.S.
   - Provide your thesis or project report (for non-thesis M.S.) to your whole committee.

e) **Immediately** after setting your final thesis defense date for a stand-alone M.S., contact Debra Peters (room 135 Pharmacy) to advertise the seminar date as required by the University.

f) Provide your project report or thesis to your major advisor for review as they are completed; proofread and spell-check beforehand.

g) Distribute the project report or thesis, with the approval of your major advisor, **2 weeks** before the final exam date.

h) If you are doing a thesis M.S, defend your thesis starting with a 30 min presentation to the scientific community/general public and your exam committee. Allow 10 min after this presentation for general Q&A before continuing your thesis defense exam with your committee. If you are doing a non-thesis M.S., a 30-min presentation on your research project will be made in a closed exam with your exam committee, followed by questions.
Students should be able to describe the specific methodologies used, identify critical observations, defend conclusions made based on these observations, and place their studies in the broader context of bioscience research. Students may pass the examination with up to one dissenting vote. If a student fails to satisfactorily pass the exam, only one additional attempt is permitted and must follow a written appeal to the College of Pharmacy Graduate Studies Committee.

i) Make final copies of your thesis after completing any revisions recommended by the committee and obtaining required signatures. Please complete a graduate student final checklist (the form is available at the end of this document) before seeking the department chair's signature. To avoid paying another semester’s tuition, all documentation must be presented within Graduate School deadlines (two weeks into the next term or six weeks from the defense date, whichever is earlier.)

• One electronic (pdf) file for the university library
• One hardbound copy for your major advisor (ask if needed)
• One hard bound copy for the pharmacy library.
• One hard bound copy for your family if desired.

(paper and binding requirements are described in OSU thesis instructions noted in part b above).

j) Celebrate your hard-earned achievement and find a ‘real job’ or continue on with your concurrent Ph.D. degree.

PhD Degree Committee Meetings, Exams and Thesis

Program Committee Meeting:
A committee meeting MUST be held by a PhD student’s 5th quarter of study by university rules. The College of Pharmacy expects the PhD thesis committee meeting to be held by the 4th academic quarter of study.

Committee Structure (five members total): The thesis committee is chaired by the student’s primary advisor. Additional committee members need to include at least one other from the College of Pharmacy. You will select a graduate school representative (GCR) from a list provided by the Graduate School.

To prepare for a first committee meeting:
1) Establish that all potential committee members are willing to serve and schedule a mutually acceptable meeting time.
2) Receive approval from the graduate school for selection of the graduate school representative.
3) Inform the university graduate school of meeting time and location.

To the first PhD / MS committee meeting bring:
1) A completed PhD program of study on the official form with grades entered, AND a MS program of study form if doing a concurrent MS degree (one copy of each for each committee member)
2) Any waivers of programmatic requirements
3) Current C.V.  
   (one copy for each committee member)
4) One to three page summary of research to date (emphasize graphic information) and a short description of future work planned.  
   (one copy for each committee member)
5) A twenty minute presentation on your research to date and plans for the future using PowerPoint slides.  
   Note that your major professor may assist you with this material for your first program meeting (this is not an exam)

Preliminary Exam
The preliminary exam is taken near or immediately after the completion of all didactic coursework, ideally early in the student’s third year of study. All PhD degree-seeking students in pharmacy are required to complete preliminary examinations within nine academic (non-summer) terms of the start of their graduate studies.
An extension may be requested by students or faculty members who anticipate that a preliminary exam will not be completed within nine academic terms. The request is made to the graduate studies committee by detailing circumstances causing delay and providing a plan for completion. Students transferring from a Master’s to a PhD degree within the pharmacy graduate program will be considered individually at the time of transfer, taking into consideration the amount of coursework completed. Transfer students should discuss a timeline for completion of preliminary exams at their first committee meeting.
Students who have not completed preliminary exams by the beginning of their tenth academic term will no longer be considered in good academic standing and will be reviewed by the graduate studies committee. As a reminder, good academic standing is required for GRA or GTA support.

At least 6 weeks before your Preliminary Oral Exam submit your signed program of study to the Graduate School.
At least 2 weeks before your Preliminary Oral Exam schedule your Oral Preliminary Exam by submitting the online Exam Scheduling Form (after your program of study has been approved by the Graduate School).
Schedule three hours for the exam by conferring with all committee members, reserving a room, and notifying the graduate school at least two weeks in advance. Paperwork will be sent to the graduate school representative prior to the exam for completion at the exam.
To pass preliminary exams, Oregon State University allows for one dissenting committee vote. Students who fail a preliminary exam may, at the discretion of the student’s committee, retake the exam after a minimum period of 30 days and before a maximum period to be determined by the student’s exam committee but not to exceed 12 months. The College of Pharmacy allows only one retake of the preliminary exam.

Nature of the Exam:  two parts, written and oral, for all students
a) Written
The written part of the exam consists of a student’s thesis proposal. The thesis proposal MUST be distributed to all committee members at least two weeks prior to the scheduled oral examination. Within one week, the thesis committee will review the written document and the major advisor will inform the student if the written document is of sufficient quality to pass. If the student passes the written portion of the prelim exam, the oral examination will continue as scheduled. If the thesis committee determines that the written portion of the exam does not pass, the oral examination will be cancelled and rescheduled. In this case, the student is advised to ask the major advisor and other committee members for information regarding the reasons for failure of the written section. The advisor and committee members should be prepared to provide general information to the student regarding the general nature and degree of problems with the written documents (for example, "grammatical errors and typos were abundant and need correcting", or "major sections, such as the background, are missing and the research plan is so vague that the experimental design is not comprehensible").

The second submission of the written portion of the prelim exam will proceed to oral examination regardless of whether the written exam is deemed passable. At the second try, the student will have the opportunity to defend their written proposal regardless of pre-judged quality. If the student fails the written and/or oral exam, the student may, at the discretion of the thesis committee, be allowed to retake the oral exam. Only one retake of the oral exam is allowed.

b) Oral

The oral exam consists of a thesis proposal presentation followed by Q&A. To begin, prepare a brief (15-20 minute) presentation of your thesis proposal. Committee members are expected to hold their questions until after the student completes his/her presentation. Initial questions will be based on the written document/thesis proposal. Questions will then expand to include any topics relevant to the discipline and the student’s program of study. Students are encouraged to form a “mock” committee of other, often senior, students to practice fielding questions.

Written exam thesis proposal
A creative proposal of your thesis project is written in the form of an NIH predoctoral PhD fellowship (F31) application (http://grants.nih.gov/grants/guide/pa-files/PA-14-147.html). The proposal should be limited to 7 single spaced, 11 point Arial font pages maximum for the narrative, excluding references. Use one-half inch margins (top, bottom, left, and right) for all pages. The proposal format and structure are described below.

Students are expected to have consulted with their major advisor regarding thesis proposal topics prior to developing the prelim exam proposal. However, faculty should not provide substantial input in the writing of the proposal. Faculty may be willing to “proofread” student proposals for basic grammatical errors and provide input into correct grant structure. Students may utilize other students for help in understanding unfamiliar techniques and are encouraged to schedule “mock prelims” for practice with senior graduate students.

Characteristics of a good thesis proposal
- Builds on your area of expertise.
- Is hypothesis driven or addresses significant scientific need-based questions
- Is based on a subject about which enough is already known that specific and focused hypotheses or experimental questions are readily developed.
• Does not have a fatal flaw at the outset, e.g., – successful completion of a first aim is necessary for all subsequent aims. This common problem can usually be remedied by providing alternative hypotheses.
• Includes sufficient background information to permit an effective review without reviewers having to refer to the literature.
• Is written with clarity, correct grammar and spelling, and concision.

Structure of the thesis proposal (adapted from NIH SF424 R&R Application Guide):

1. **Specific Aims** (1 page). State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved. List succinctly the specific objectives of the research proposed, e.g., to test a stated hypothesis, create a novel design, solve a specific problem, challenge an existing paradigm or clinical practice, address a critical barrier to progress in the field, or develop new technology.

2. **Research Strategy** (6 pages). Organize the Research Strategy in the specified order and using the instructions provided below. Start each section with the appropriate section heading—Significance, Innovation, Approach. Cite published experimental details in the Research Strategy section and provide the full reference in the Bibliography and References Cited section.

   (a) **Significance**
   • Explain the importance of the problem or critical barrier to progress in the field that the proposed project addresses.
   • Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
   • Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.

   (b) **Innovation**
   • Explain how the application challenges and seeks to shift current research or clinical practice paradigms.
   • Describe any novel theoretical concepts, approaches or methodologies, instrumentation or interventions to be developed or used, and any advantage over existing methodologies, instrumentation, or interventions.
   • Explain any refinements, improvements, or new applications of theoretical concepts, approaches or methodologies, instrumentation, or interventions.

   (c) **Approach**
   • Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project.
   • Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims.
   • If the project is in the early stages of development, describe any strategy to establish feasibility, and address the management of any high-risk aspects of the proposed work.
   • Point out any procedures, situations, or materials that may be hazardous to personnel and precautions to be exercised.
If research on Human Embryonic Stem Cells (hESCs) is proposed but an approved cell line from the NIH hESC Registry cannot be identified, provide a strong justification for why an appropriate cell line cannot be chosen from the Registry at this time. If an applicant has multiple Specific Aims, then the applicant may address Significance, Innovation and Approach for each Specific Aim individually, or may address Significance, Innovation and Approach for all of the Specific Aims collectively.

More information on writing an NIH-style grant proposal is available through the NIAID website at https://grants.nih.gov/grants/how-to-apply-application-guide/format-and-write/write-your-application.htm. This site includes helpful information on planning, formatting and writing NIH grants.

**Final Ph.D. Defense**

k) Writing the thesis: plan 4-6 months start to finish, writing part-time during this period.

l) Students **MUST** obtain instructions for procedure, format and details for finishing the thesis from the university graduate school (https://gradschool.oregonstate.edu/progress/thesis-guide). OSU allows two different formats for a graduate thesis, standard or manuscript. The student and major advisor should determine which format is appropriate.

m) Before scheduling your thesis defense, you should prepare a list of:
   - Papers published (full citation)
   - Papers submitted
   - Manuscripts in preparation
   - Regional and national meetings attended and source of funding
   - Honors/fellowships/awards received
   - Post graduation employment plans

Submit it to your major advisor and the Graduate Studies Committee (Conroy Sun, Director of Graduate Programs). Your major advisor will hold off on signing your dissertation until this requirement is met.

n) Plan a date for the defense at least two months in advance with your committee; reserve a room for a one-hour seminar and a two-hour final exam.

o) **File all paperwork required by the Graduate School well in advance of the defense date.**
   - At least **15 weeks** before your Final Oral Defense of Dissertation submit diploma application.

   At least **2 weeks** before your Final Oral Defense of Dissertation:
   - Schedule your Exam by submitting the online Exam Scheduling Form to the Graduate School
   - Submit pre-text pages to the Graduate School
   - Give dissertation to your whole committee
p) Immediately after setting your defense date, contact Noelle Cummings to advertise the seminar date as required by the University.

q) Provide chapters to your major advisor for review as they are completed; proofread and spell-check beforehand.

r) Distribute the thesis, with the approval of your major advisor, 2 weeks before the final defense date.

s) Defend your thesis starting with a 50 min seminar for the scientific community. Following the seminar, two hours should be scheduled for the thesis defense exam with the committee. Students should be able to describe the specific methodologies used, identify critical observations, defend conclusions made based on these observations, and place their studies in the broader context of bioscience research. Students may pass the examination with up to one dissenting vote. If a student fails to satisfactorily defend the thesis, only one additional attempt is permitted and must follow a written appeal to the College of Pharmacy Graduate Studies Committee. The thesis defense must be completed within five years after the preliminary exam.

t) Make final copies of your thesis after completing any revisions recommended by the committee and obtaining required signatures. Please complete a graduate student final checklist (the form is available at the end of this document) before seeking the department chair’s signature. To avoid paying another semester’s tuition, all documentation must be presented within Graduate School deadlines (two weeks into the next term or six weeks from the defense date, whichever is earlier.)

• One electronic (pdf) file for the university library
• One hardbound copy for your major advisor (ask if needed)
• One hard bound copy for the pharmacy library.
• One hard bound copy for your family if desired.

(paper and binding requirements are described in OSU thesis instructions noted in part b above).

u) Celebrate your hard-earned achievement and find a ‘real job’ or continue your training with a postdoctoral research position!
Course Curricula

Graduate assistants are to register for a minimum of 16 credit hours (CH) and graduate fellows are required to register for 12 CH each term, with research credits or elective courses in addition to the required coursework. Before choosing a thesis research laboratory, Ph.D. students are recommended if not required to complete three laboratory rotations (one per quarter) in Pharmaceutical Sciences during the first year of their program. Course curricula in the graduate program in pharmaceutical sciences will vary from student to student and should be discussed early with the graduate program director and/or first rotation advisor.

See the OSU Schedule of Classes website to check quarter/term and time of day of courses to ensure no overlap:
https://classes.oregonstate.edu/

Specific curricula for each of the subdisciplines, drug discovery, gene regulation and disease, and targeted drug delivery are provided on the following pages.

NOTE THAT THE MOST UP-TO-DATE INFORMATION IS ON THE OSU SCHEDULE OF CLASSES WEBSITE ABOVE. COURSE DETAILS CHANGE PERIODICALLY.
Gene Regulation and Disease Subdiscipline in Pharmaceutical Sciences

Research in gene regulation and disease utilizes knowledge and techniques developed in a wide array of disciplines including biochemistry, molecular biology, cell biology, physiology, and increasingly, computational techniques. **Note that CH = credit hours.**

The required curriculum for Gene regulation and disease students is:

- Minimum of 3 (usually 5 or more) credit hours (CH) of research rotation (PHAR 501 and/or 601) each academic term (fall, winter and spring) in the first year.
- 1 CH of Seminar (PHAR 507) every academic term of every year.
- Foundations of Drug Action I and II (PHAR 525 and 527, 3 CH each, or PHAR 735 and 737 for PharmD/PhD students), fall and winter terms, respectively.
- Advances in Manipulating the Human Genome PHAR 594.
- General biochemistry BB 550 and 551 (3 and 4 CH, respectively) taught various terms or at least two terms of the BB 590, 591, and 592 (3 CH each) series
- Introduction to Grant Proposal Writing, PHAR 669, 2 CH in fall term, usually in second year.
- Research Ethics (e.g. GRAD 520, 2 CH), offered most terms.
- Diversity, Equity and Inclusion (DEI) training (quarterly in PHAR 507 seminar, or equivalent).

Students who have completed an upper level undergraduate course in biochemistry may request a waiver of the requirement to take the Biochemistry series. A letter to the Graduate Studies Committee should explain the reason for the waiver request and be approved the major advisor. If approved, the committee will issue a letter to be kept on file with the student’s Program of Study.

Gene regulation and disease students are strongly recommended to take at least one term of Pharmacology within the Integrated Drug Actions courses in the form of PHAR 591, 592 or 593, 5 CH each.

The graduate minor in Biological Data Sciences is strongly recommended to provide training for students to apply modern approaches to gene regulation and disease research. Requirements can be found at [https://cgrb.oregonstate.edu/training/blds/course-requirements](https://cgrb.oregonstate.edu/training/blds/course-requirements). Alternatively, select courses in computational methods can be found under the BDS, MB, BOT, CS or ST prefixes.

Students will need to choose elective courses in consultation with their advisor to complete at least 27 major course (didactic) credits for the PhD degree. A concurrent MS degree will require at least 3 additional didactic credits. Please see the section on a concurrent MS degree for more details.

**Potential elective courses include (but are not limited to, please discuss with your advisor):**

- Applied Biopharmaceutics and Pharmacokinetics PHAR 572
- Cancer and Chemoprevention PHAR 563
- Infectious Diseases and Treatments PHAR 547
- Biochemistry laboratory I and II BB 593, 594
- Methods of Data Analysis ST 511, 512, 513
- Molecular Therapeutics TOX 699
- Advanced Xenobiotic Metabolism TOX 575
- Target Organ Toxicology TOX 512
- Computational Toxicology and Risk Assessment TOX 580
- Applied Bioinformatics BB 585
- Advanced Molecular Genetics BB 586
- Immunology MB 516
- The Human Microbiome MB 436
- Behavioral Neurobiology IB 538
- Science Communication IB 515
- Science and Policy IB 518
- Cancer Systems Biology VMB 561
- Modeling of Physiological Systems BIOE 512
| Drug and Medical Device Regulations | BIOE 513 |
Targeted Drug Delivery Subdiscipline in Pharmaceutical Sciences

Prerequisites: Students must be proficient in using computers. Insufficient computer skills may be remedied with undergraduate coursework, e.g., CS101. Students whose undergraduate degree is not in the pharmaceutical sciences or pharmacy must take PHAR 733 and/or 734 to increase their background knowledge. Students are also expected to have or obtain background in calculus equivalent to MATH 251, 252, 253 or 254 (calculus series). **Note that CH = credit hours.**

The required curriculum for Targeted Drug Delivery students is:

- Minimum of 3 (usually 5 or more) credit hours (CH) of research rotation (PHAR 501 and/or 601) each academic term (fall, winter and spring) in the first year.
- 1 CH of Seminar (PHAR 507) every academic term of every year.
- Foundations of Drug Action I (3 CH, PHAR 525 for MS/PhD; 735 for PharmD/PhD students)
- Introduction to Grant Proposal Writing, PHAR 669, 2 CH in fall term, usually in second year.
- Research Ethics (e.g. GRAD 520, 2 CH), offered most terms
- Diversity, Equity and Inclusion (DEI) training (quarterly in PHAR 507 seminar, or equivalent).

Students will need to choose elective courses in consultation with their advisor to complete at least 27 major course (didactic) credits for the PhD degree. A concurrent MS degree will require at least 3 additional didactic credits. Please see the section on a concurrent MS degree for more details.

Potential elective courses include (but are not limited to, please discuss with your advisor):

- Pharmaceutics I PHAR 733 (3 CH)
- Pharmaceutics II PHAR 734 (3 CH)
- Physical Chemistry CH 540 (3 CH), 541 (3 CH)
- Radiochemical Analysis NSE 519 (4 CH)
- Biochemistry BB 590, 591, 592 (3 CH each)
- Exp. App. to Biopharm PHAR 571 (3 CH)
- Appl. Biopharmaceutics & Pharmacokinetics PHAR 572 (3 CH)
- Pharmacodynamic & Pharmacokinetic Modeling PHAR 580 (3 CH)
- Current Topics in Pharm. Sci. PHAR 573 (3-9 CH)
- Special Topics in Pharm. Sci. PHAR 699 (3-9 CH)
- Adv Drug Metabolism PHAR 575 (3 CH)
- Statistics ST 511, 512, 513, 551, 552, 553, 521, 522, 515, 531
- Immunology MB 516 (3 CH)
- Pharmacokinetics PHAR 750 (4 CH)
- Nanomedicine I PHAR 574 (3 CH)
- Advanced Pharmaceutics PHAR 770 (4 CH)
- Radiation Biology I NSE 583 (3 CH)
- Advanced Xenobiotic Metabolism & Disposition TOX 575 (2 CH)
- Vaccines and New Therapies VMB 674 (3 CH)
Drug Discovery Subdiscipline in Pharmaceutical Sciences

Course requirements for two possible tracks within drug discovery, bioorganic chemistry or molecular biology/biochemistry, are detailed below. Students will need to consult with their major advisor to discuss tracking and choice of electives. **Note that CH = credit hours, except for in course codes, where CH = Chemistry**

The required curriculum for Drug Discovery students is:
- Non-thesis research rotations (PHAR 501, 12-15 CH total in fall, winter, and spring terms of first year)
- Foundations of Drug Action I (3 CH, PHAR 525 for MS/PhD; 735 for PharmD/PhD students)
- Biochemistry (6 CH, BB 590, 591) in fall and winter
- Bioorganic Chemistry (3 CH, PHAR 537, alternating years in winter)
- Structure Determination by Spectroscopic Methods (3 CH, CH 535, fall)
- Introduction to Grant Proposal Writing (2 CH, PHAR 669, fall)
- Responsible Conduct of Research (2 CH, GRAD 520, most terms)
- Diversity, Equity and Inclusion (DEI) training (quarterly in PHAR 507 seminar, or equivalent).

Students who have completed an upper level undergraduate course in biochemistry may request a waiver of the requirement to take the Biochemistry series. A letter to the Graduate Studies Committee should explain the reason for the waiver request and be approved the major advisor. If approved, the committee will issue a letter to be kept on file with the student’s Program of Study. Students will need to choose elective courses in consultation with their advisor to complete at least 27 major course (didactic) credits for the PhD degree. A concurrent MS degree will require at least 3 additional didactic credits. Please see the section on a concurrent MS degree for more details.

**Suggested Courses for the Bioorganic Chemistry Track**
CH 630, 631 Adv. Organic Chemistry 6 CH (fall, winter)

**Suggested Courses for the Molecular Biology/Biochemistry Track**
BB 592 Biochemistry 3 CH (spring)

**Potential elective courses include (but are not limited to, please discuss with your advisor):**

- GRAD 542 Diversity, Equity and Inclusion (DEI) training 3 CH
- BB 654 Proteins 3 CH
- BB 593, 594, 595 Biochemistry Lab 3 CH/each
- BDS 599 Special Topics: ST/Intro to UNIX, LINUX 1 CH
- BDS 599 Special Topics: ST/Command-line data analysis 1 CH
- CH 661 Separations: Chromatography + Related Methods 4 CH
- CH 636, 637, 638 Selected Topics in Organic Chemistry 3 CH/each
- CH 697 Mass Spectrometry of Organic Compounds 3 CH
- CH 524 Bioanalytical Chemistry 3 CH
- MB 554 Microbial Genetics 4 CH
- MB 556 Microbial Genetics and Biotechnology 3 CH
- MB 599 Selected Topics: Problem Solving 3 CH
- MB 668 Bioinformatics and Genomics (first module) 2 CH
- MB 516 Immunology 3 CH
- MB 530 Bacterial Pathogenesis 3 CH
- PHAR 575 Advanced Xenobiotic Metabolism 3 CH
- PHAR 564 Receptor and Signal Transduction 3 CH
- ST 511 Methods and Data Analysis 4 CH
- TOX 575 Advanced Xenobiotic Metabolism & Disposition 2 CH
Pharmacy professional courses approved for use on a graduate program of study

The graduate council of OSU approved the use of the following professional pharmacy student courses as eligible for use on a graduate student program of study. No other professional pharmacy courses have been approved.

- PHAR 733  Pharmaceutics I (3 CH)
- PHAR 734  Pharmaceutics II (3 CH)
- PHAR 735  Foundations of Drug Action I (3 CH)
- PHAR 737  Foundations of Drug Action II (3 CH)
- PHAR 746  Pharmacy Management (3 CH)
- PHAR 747  Infectious Diseases and Treatments (3 CH)
- PHAR 748  Drug Actions in Immunology and Inflammation (3 CH)
- PHAR 750  Pharmacokinetics/Biopharmaceutics (4 CH)
- PHAR 752  Integrated Drug Structure, Action and Therapeutics I (7 CH)
- PHAR 753  Integrated Drug Structure, Action and Therapeutics II (7 CH)
- PHAR 754  Integrated Drug Structure, Action and Therapeutics III (6 CH)
- PHAR 770  Advanced Pharmacokinetics (4 CH)
- PHAR 773  EBM III: Evidence Synthesis and Decision Analysis (3 CH)
- PHAR 776  PHARMA-CSI (advanced kinetics elective, 2 CH)
NOTE: The forms on the following pages are available online at:
http://pharmacy.oregonstate.edu/phd-student-resources
Pharm. Sci. Graduate Student Rotation Evaluation Form

STUDENT:

INSTRUCTOR:

YEAR AND QUARTER:

__________________________________________

Please evaluate the student’s performance in the listed categories; use numerical scores of 1 (poor) to 5 (excellent) and provide explanatory or additional comments.

Acquired knowledge (1-5) ___.

Ability to work with others (1-5) ___.

Maturity (1-5) ___.

Effort (1-5) ___.

Laboratory Skills (1-5) ___.

Communication (1-5) ___.

Overall average (1.0-5.0) ___.

GRADE for this rotation ___.
(4.5 - 5.0 = A, 4.0 - 4.5 = A-, 3.5 - 4.0 = B+, 3.0 - 3.5 = B, 2.5 – 3.0 = B-, 2.0 – 2.5 = C, < 2.0 = F)

Please provide detailed explanations of grades at either extreme (i.e. A, or C or less)
Additional comments:

The signatures below indicate that this evaluation was discussed by the student and the mentor.

Student Signature __________________________ Date ______________________

Mentor Signature __________________________ Date ______________________

When completed, please make a copy for yourself and send the original form to Debra Peters

NOTES

Please submit this form to the Graduate Program Director or Department Chair when you ask for their signature.
The professor you meet with for an exit interview can receive forms and sign all of the above sections.
Curtis and Isabella Holt Graduate Student Scholarships

The Curtis and Isabella Holt Work Scholarship will be used to award outstanding graduate students in the College of Pharmacy through one-time awards and fellowships. The College of Pharmacy Graduate Studies Committee will select the recipients of the Holt Graduate Research Achievement Award and the Holt Graduate Fellowship.

**Holt Graduate Research Achievement Awards:**
Awarded to the outstanding students selected on the basis of exceptional research achievement and participation in the College, University and professional communities.
Two awards are available at $2,500 each.
Eligibility: Must be a graduate student in good standing, have successfully completed their preliminary examination, and be conducting their PhD thesis work under the direction of a College of Pharmacy faculty member. Recipients may be domestic or international students.
Application materials to be reviewed include: (1) a personal statement describing the graduate student’s current research, notable achievements or recognition of the research, activity in College, University and professional communities, and their long-term professional goals; (2) a current curriculum vitae; and (3) a letter of support from their major professor (Principal Investigator).
Applications must be submitted by September 30, 2022.

**Holt Graduate Fellowship:**
The award ($10,000) will be used to partially support the stipend and tuition for a graduate research assistant. The intent of the award is to recognize outstanding students (in research and community participation), and relieve funding support concerns.
Candidates for the award must be currently enrolled students in the program and will be nominated by their major professor. Incoming students may also be nominated by the director of Graduate Programs.
Application materials to be reviewed include: (1) a personal statement describing the graduate student’s current research, notable achievements or recognition of the research, activity in College, University and professional communities, and their long-term professional goals; (2) a current curriculum vitae; and (3) a letter of justification/need from their major professor (Principal Investigator).
Eligibility: Must be a current student in good standing conducting their PhD thesis work under the direction of a College of Pharmacy faculty member. Incoming graduate students with exceptional academic merit or experiential qualifications may also receive the fellowship. Recipients may be domestic or international students.
Applications must be submitted by September 30, 2022.
